目录

1. 想挑战行业老大：先复制他们的第一版设计（To compete against an incumbent, copy their first design）
2. Bluesky 即将加入“链接点击”指标（Bluesky will soon add "link clicks" metrics）
3. 68% 的人觉得动态定价在操控他们：独立开发者能做什么？（68% of people feel manipulated by dynamic pricing. What can indie hackers do about it?）
4. Bluesky 变得有点“乌云密布”（Bluesky gets a bit cloudy）
5. Twitter 和 Medium 创始人 Ev Williams 发布新社交应用（Ev Williams, founder of Twitter and Medium, launches a new social app）
6. 特朗普可能会叫停 TikTok 禁令（Trump might halt the TikTok ban）
7. 新的招聘岗位持续下滑（New job postings continue declining）
8. Snapchat 推出新的创作者变现计划（Snapchat launches a new creator Monetization Program）
9. xAI 将升级版 Grok-2 向所有 X 用户开放（xAI releases improved Grok-2 model to all X users）
10. Bluesky 用户突破 2500 万（Bluesky hits 25 million users）
11. BuzzFeed 以 8250 万美元出售爆款频道 Hot Ones（BuzzFeed sells hit YouTube show Hot Ones for $82.5M）
12. 认识那些“破解”X 算法的独立开发者（Meet the indie hackers cracking the X algorithm）
13. Bluesky 承诺继续对媒体/出版方友好（Bluesky promises to stay friendly to publishers）
14. OnlyFans 创作者正在用 AI 跟粉丝聊天（OnlyFans creators are using AI to chat with their fans）
15. 50% 的 TikTok 用户在 TikTok Shop 下过单：这些数据很夸张（50% of TikTok users have bought on TikTok Shop: Here are the wild stats）

16. WordPress CEO Matt Mullenweg 在法院禁令后私下吐槽（WordPress CEO Matt Mullenweg privately vented his frustration after a recent court injunction）
17. 2025 年独立开发者的恋爱真相：为什么 30% 连尝试都不想（The truth about dating as an indie hacker in 2025: Why 30% won't even try）
18. Instagram 上线 Trial Reels（试验 Reels）（Instagram releases Trial Reels）
19. 品牌正在利用 Z 世代"脑腐/脑烂（Brain Rot）"梗做营销（Companies are leveraging Gen Z's "Brain Rot" trend in their marketing）
20. TikTok 正加速扩张欧洲市场（TikTok is rushing to expand into Europe）
21. Google 刚公布 2024 年最热搜索词（Google just published the top trending searches in 2024）
22. TikTok 揭晓年度最大趋势（TikTok reveals its biggest yearly trends）
23. 与 Alex Hormozi 的"内卷/拼命"之争：奋斗文化还值得吗？（The grind debate with Alex Hormozi: is hustle culture still worth it?）
24. 创造力才是一切（Creativity is the only thing）
25. TikTok 禁令上诉失败（TikTok loses its ban appeal）
26. YouTube 发布年度趋势报告（YouTube releases its report on the year's top trends）
27. 15% 的 Google 搜索仅由 148 个词驱动（15% of all Google searches are driven by only 148 search terms）
28. Cameo 从一线明星转向普通创作者（Cameo is pivoting from A-list celebs to creators）
29. Kai Cenat 月度长播打破 Twitch 订阅纪录（Kai Cenat breaks the Twitch subscriber record during his month-long stream）
30. ChatGPT Search 近一半时间会错标新闻来源（ChatGPT Search misattributes news sources nearly half the time）
31. AI 崛起：LinkedIn 上一半帖子不再真实（The rise of AI: half of LinkedIn posts aren't real anymore）
32. 为什么 Bluesky 可能是你下一个网站流量金矿（Why Bluesky might be your next website traffic goldmine）
33. 爱好不只是娱乐：它是独立开发者的秘密武器（Hobbies aren't just fun — they're indie hackers' secret weapon）
34. Adobe：假期桌面端转化率是移动端的 2 倍（Adobe: Our holiday conversion rates were 2x higher on desktop）
35. Spotify 砍掉多个 API 功能的访问权限（Spotify has cut access to several of its API features）
36. 超过 1.5 万家商家在 Stripe 迎来"史上最好的一天"（15,000+ businesses are having their "best day ever" on Stripe）
37. Marc Lou 推出编程课 CodeFast，两天赚 9.2 万美元（Marc Lou launches coding course CodeFast, makes $92k in two days）
38. 欧盟想帮初创公司：但初创能扛住欧盟监管吗？（The EU wants to help startups. Can startups survive EU regulations?）

39. TikTok 给出 10 条长视频制作建议（TikTok hands out 10 tips on how to make long-form videos）

23. 与 Alex Hormozi 的“内卷/拼命”之争：奋斗文化还值得吗？（The grind debate with Alex Hormozi: is hustle culture still worth it?）

- 作者：Michal Kankowski | 时间：December 8, 2024
- 原文链接：https://www.indiehackers.com/post/mLVnAkiaYUB03DFIYZjA
- 原文摘要：Indie hackers debate whether sacrificing everything is still the key to building big.

> 说明：该文存在订阅墙/登录墙；本地抓取到的可见正文为空或仅包含订阅提示，因此本章不补写、不翻译。

---

24. 创造力才是一切（Creativity is the only thing）

- 作者：Joe Alterio | 时间：December 6, 2024
- 原文链接：https://www.indiehackers.com/post/MbOksGhdAzZVVjcy0WCB
- 原文摘要：An open letter to my fellow creatives in a dark hour.

> 说明：以下内容为本地抓取到的可见正文（原文）。如需进一步翻译，可在此基础上继续处理。

Seventeenth century Dutch philosopher Baruch Spinoza makes a kind of ontological argument around the state of being that was both obvious and radical at the time–essentially, that which is made (everything) is divine by the fact that it is made. Its the type of statement that seems both obvious and puzzling when one takes a moment to think on it. Taking at face value that the divine is “good”, then that which is made, and hence the act of making, is also always a net good.

Context is important. The era which Spinoza was living was a fairly dangerous time. Spinoza’s Jewish grandparents faced brutal persecution at the hands of the Portuguese Inquisition. We often think of The Enlightenment as a period of robust intellectual growth in which the thinkers won the day, but that’s not exactly true. In periods of new awakening many people, especially those in power, don’t really like new ideas, it turns out. For every new idea, there were

imprisonments, fines, banishments, and executions. At the same time of the Portuguese Inquisition, around the world we can clock the Yangzhou massacre, the atrocities of the first English Civil War, to say nothing of the knee-jerk reactions of most common people to the radical ideas forming at the time. The human story may look like an upward swing from far away, but there are a lot of

very

steep downward swoops along the path.

We may be in the middle of one now, a period of change and awakening. And like previous periods of same, there are so many things to be currently worried about — potential authoritarianism, genocide, religious fanaticism, climate change, uncontrolled AGI, unleashed nativism — that a period of change is handmaid with a period of struggle again.

We've made a queer mess of life

, it seems.

In uncomplicated times, it is easy to dismiss creativity as unserious. In the hardest times, its everything there is.

Creativity is risk.

To do something different, or meaningful, or human, is messy. Creativity is accessing the part of the brain adjacent to emotions, and emotions are the opposite of rationality. It doesn't fit neatly into an ideal customer profile. You can't attach quarterly goals to it.

I often talk about "design" on this blog, but the word "design" is kind of a stalking horse for me. By "design", I mean

creativity on a mass scale

. I do

not

mean non-creative "design", as so popularized by

mercantile bozos in the modern era

, a role akin to following the directions in a Lego booklet. For the past twenty years, creativity, art, and philosophical musing have gotten in the way of "design" (read: making money). We were told it was the era of Big Data. Let the data make decisions.

It will not lead us astray

. For ease of reference, let’s call this

the numbers game

.

Here’s a truth: the numbers game is intimately related to hard times. Any time the wrinkled tapestry of humanity has been put into the narrow strictures of a system, the system drives the humanity out of it, and all that is left is the system itself. It has happened

time

and

time

and

time

again. Hell,

several middling movies

were made about it. On a long enough timeline, systems applied to humans

always

end up proving their worth on the disruption of the ordinary human to demonstrate value. I’m not exactly sure why every generation needs to learn this lesson on its own.

If you’ve made it this far, now here comes the part where I level with you and tell you the bad news: the Bad Guys are kind of winning right now. This iteration of the numbers game is wildly successful. If you are a young person reading this, you have my empathy, as you maybe only have a distant memory of time when all the most abysmally awful people were not continually rewarded with riches. By giving our internal thoughts and yearnings over to digital buckets, we commoditized the very weird and wild humanity that made us as a species so successful. Maybe the most appalling part is that, for at least a small period of time, we did it willingly. I was a part of that generation, and I admit it: I was wrong. I fucked up. I thought it would be like Star Trek. I don’t know what what to say.

Now that the world is falling apart and everyone is out of a job, it might be time to take that dusty old creativity out of the box and look at it again.

There is a term of art in the business of making things called “neutralization.” In neutralization, you look at whoever is the leader of whatever you’re trying to make, and you copy all the parts that work. It makes sense — if you’re going to beat them at their game, you want to make it as easy as possible for someone to switch to your thing. Give the people your competitor’s thing, plus something else (“differentiation”). This is the basic construct. So neutralization + differentiation = maybe a new thing people want. Maybe.

Image Source: Telegurus

This may in fact lead to success, a kind of evolutionary feedback loop that creates a timeworn shape. So it is with nature, as well: a single form takes hold in a system, and evolution refines that form. But that’s only true if the environment is

static

. When the environment changes, the traits rewarded change as well. This is the fundamental truth of evolution: traits are only as valuable as the environment which rewards them. Dinosaurs varied in all different shapes and approaches, and were a radically successful species. But when

Chicxulub came knocking

, the environment no long rewarded those massive calorie monsters anymore. The environment changed, and the new environment was one that rewarded small, scavenger mammals.

The environment has again changed, and I say hello to my fellow rodent weirdos. 👋

Here’s how I know artistic creativity is a powerful spell that those in power can’t subvert easily: there’s no fucking money in it.

If you’re interested in learning about what a society values, look at what their education system focuses on. Here in America at least, the love with data and rote computation begins early. We require our students learn to take tests, to compete for spots in meritocratic schools, and finally, to fill the ranks of the upper-middle class set of strivers, who will beget their own little striver offspring. A student that has outre views or is unwilling to settle down to the task at hand at their desks is branded as trouble-maker, or worse. There’s a very simple reason for that: the educational system is by and large designed to reward conformist, data-driven thinking. Our factories and data centers demand bodies to operate the switches, because there is money to be made in the operation of switches.

By happenstance, we find ourselves now at a time when the value of the human worker — the switch operator — is being challenged. We don't need to wait for AGI to threaten this base societal valuation: it is here now. As I outlined in a

previous piece

, the commodified creative is already a lost battle. Finding yourself in a digital creativity space these days is finding yourself asked to perform pattern-matching, and not much more. How to increase views. How to get more likes. Strategies for maximizing subscriber tiers. The miasma is filled with strategies to find a way to adapt to this era, and most of them are

depressing and stupid

. I propose an entirely different and mostly irrational alternative strategy: giving up and retreating to our humans roots.

I think this current modality we are living in has reached the end state. I think the changes that will happen in the next ten years will be so radically contra to what you know now, that investing in anything that approaches your current life or understanding of the world will be useless. And in this moment, the fool of the class becomes the star student.

The final disruption is of the system itself. And radical creative humanness is the sword we can wield.

Roussot et Ferrier (1970)

I am not going to insult you, reader, and propose that hard times cause good work: for every breakup or bubonic plague that makes a good sad song or Decameron, there's millions of other awful events that yield nothing but pain and misery. Instead, I suggest we flip the conceit on its head. For every wonderful piece of work, there's usually a seed of introspection that reveals a deeper truth.

In dark times, the things that were fluff become the things that people need and hold on to, tightly. To paraphrase Tolstoy, everyone's unhappiness is unique, but there are things that join us, and the the things that join us are the things that give people purpose — faith, insight into their fellow humans, and strength to get on with the ordinary business of living. As a creative person, you are uniquely positioned to be doing those things.

Suffering is a part of life, but suffering does not have to be the end state. Making something important to you is an expression of what is inside you. The form is immaterial, whether an app or poem. But the creation of something for

an audience of one is so in opposition to what we've have been told is important — the revenue, the likes, the audience — that it feels radical in its lack of supervision.

Indulge me in a mild thought experiment. Pretend, for a moment, you are the only person on the planet. No one will ever see your work. No compliments or awards will ever come. No critique or canceling will ever occur. You don't have to worry about approval from an app store, or going viral, or whether it gets picked up by Netflix. There is no audience, at all. What would you make?

If you're anything like me, so poisoned by the internet, to actually consider this is a little bit jarring. It is in this moment, you see how truly captured we are by the current numbers game. This is how the forces of darkness win — they convince you that what you make is only important in how it is related to what they want: more power, more money, more attention.

But it is not so. You do not have to play their game, really. You may have to work their jobs, you may have to exist in their world, but you don't have to care what they think.

Its not your fault

.

This is what you must do: you must think and sit and consider what value you bring to the world. You are free, if you want.
